

TECHNOLOGY COMPANY OF THE YEAR

GalaxE.Solutions Inc.

Across the country and overseas, large companies in a range of industry sectors, including healthcare, telecommunications, financial, automotive, retail and others, are seeking to reinvent, rethink and transform the way their business is run — most notably through technology. Such companies need information technology solutions that are innovative, agile and cost effective but also with an increasing focus on quality.

Created by custom software developer GalaxE.Solutions, "Outsource to Detroit" is a model for custom IT software solutions conducted in the city's burgeoning downtown IT cluster that is putting U.S. professionals back to work. Not only can the next generation of IT solutions be created here at price points comparable to traditional offshore locations, but also, importantly, with high qualitative marks that large, offshore-based outsourcing firms have not been able to achieve.

Today, Detroit is positioned more than ever to bridge an offshore gap for quality IT innovation and services, conducted by experienced, well-skilled IT professionals, underscored by all-important quantitative advantages, to create value and success for companies worldwide.
